Almost Periodic Functions. Harald Bohr. Göttingen
Winter Semester
W.S. 1928-9. Vol. I

- P. 1 Almost Periodic Functions, Introductory
- 4 Definition 1
- 7 Definition 2
- 8 Definition 3
- 11 Prelude. Bessel's Formula for Orthogonal Systems
- 14 Fourier coefficients of an orthogonal system
- 16 Bessel's inequality
- 20 First Proof
- 21 Second Proof. Case of Equality
- 22 Proof
- 23 Part I. Chapter I. Pure-Periodic Functions. §1. Functions
of one variable. Theorem 1.
- 24 Theorem 2. Proof. Stage 1
- 25 Stage 2
- 27 Stage 3
- 28 Proof of Theorem 1
- 30 Theorem 3. Proof
- 32 Theorem 4 (The Riemann Lebesgue theorem). Proof
- 33 Theorem 5
- 34 Proof. Theorem 6. Theorem 7. Theorem 8
- 35 Theorem 9. Theorem 10. Theorem 11
- 36 Theorem 12
- 37 Theorem 13. Proof
- 38 Theorem 14. Proof
- 39 Uniqueness and Vollständigkeit. Uniqueness
- 40 Vollständigkeit
- 41 Parseval's Theorem (Theorem 15)
- 42 Direct Proof of the Uniqueness Theorem (Theorem 16)
- 51 Fejér's Example of a continuous function whose Fourier
series does not converge everywhere. Lemma 1

52	Lemma 2. Proof	
54	Fejer's proof of the Approximation Theorem. (Theorem 17)	
	Definition 4	
63	§ 2. Functions of m variables	
64	The Approximation Theorem in m dimensions. (Theorem 18)	
69	§ 3 A space in an enumerable infinity of dimensions	
70	Definition 5. Definition 6. Definition 7	
71	Theorem 19. Proof. Theorem 20. Proof	
72	Definition 8	
73	Definition 9. Theorem 21. Proof. Definition 10	
74	Theorem 22	
75	Definition 11	
76	Definition 12. Theorem 23. Proof	
77	Definition 13. Remark	
79	Theorem 24. Proof	
80	Definition 14	
81	Definition 15. Definition 16	
82	Definition 17. Theorem 25. Proof	
83	Definition 18	
84	Definition 19. The Karck-Hilbert Theorem. (Theorem 26)	
	Proof	
87	Definition 20. Arzela's Theorem (Theorem 27). Proof	
90	Theorem 28. Remark	
91	Proof of Theorem 28	
93	Martelli's Theorem (Theorem 29). Proof	
95	§ 4 Periodic Functions in Λ -space. Definition 21	
96	Theorem 30. Proof	
97	Theorem 31. Proof	
98	Theorem 32. Theorem 33. Theorem 34	
99	Proof	
100	Theorem 35. Proof	
101	Mean Values and Fourier Series in Λ -space	
102	Theorem 36. Proof	

- 2 Add. M. 6. 192
- p. 105 The Approximation Theorem in A -space. Theorem 37
- 106 Remark. Proof
- 108 The Unicity Theorem in A space; (Theorem 37)
- 109 Chapter II. Limit-periodic Functions. §5. Limit-periodic Functions of one variable. Definition 22
- 110 Remark. Theorem 38
- 111 Proof. Definition 23
- 112 Theorem 39. Proof. Definition 24. Lemma on Diophantine approximation (Theorem 40)
- 114 Theorem 40
- 115 Proof
- 116 Mean Value and Fourier Series. Theorem 41. Proof
- 118 Fejer Summation and the Unicity Theorem. Theorem 42. Proof
- ? 120 §6. Limit-periodic functions of n variables. Definition 25
- 121 Theorem 43. Proof
- 122 Theorem 44. Proof
- 123 Mean Value and Fourier Series
- 124 Theorem 45
- 125 Proof
- 127 §7. Limit-periodic functions in A -space. Definition 26. Theorem 46
- 128 Proof
- 129 Mean Value and Fourier Series
- 130 Theorem 47. Proof
- 132 Another form of Definition 26
- 136 Theorem 48
- 137 Chapter III. Diophantine Approximation and Bohl Functions. §8. Diophantine Approximation
- 139 Theorem 49
- 140 Proof

p. 144	Theorem 50. Proof
146	The Bohl Weierberg Theorem (Theorem 51). Theorem 52
147	Proof
150	§9. Bohl Functions
151	Definition 27. Definition 28
157	Mean Values and Fourier Series
160	§10. Generalisation of the Problem which corresponds to Bohl functions
163	Definition 29
165	Theorem 53
166	Theorem 54. Definition 30
167	Theorem 55
168	Proof. Definition 31
169	Definition 32
170	Theorem 56. Proof
171	Theorem 57. Proof
172	Theorem 58
175	Part II. Chapter III. Almost-Periodic Functions of a Real Variable. § 11. on the definition of almost-periodicity. Theorem 59. Proof
176	Theorem 60. Proof. Theorem 61. Proof. Theorem 62
177	Proof. Theorem 63. Proof. Theorem 64
178	Proof
185	Definition 33'. Definition 34. Definition 33
187	§12. Invariance of almost periodicity to the elementary operations. Theorem 65. Remark
188	Proof of theorem 65
190	Theorem 66. Proof. Theorem 67. Proof
192	Theorem 68
193	Proof. Theorem 69. Proof. Theorem 70. Proof
194	Theorem 71. Proof
195	§13. Normal Properties of Almost Periodic Functions. Definition 35. Theorem 72. Proof

- p. 197 Theorem 73. Proof
- 199 § 14. Translation Functions. Definition 36. Definition 37
- 200 Theorem 74. Definition 38. Definition 39
- 202 Theorem 75. Proof. Corollary
- 203 A. p. translation functions. Theorem 76. Proof
- 204 Theorem 77. Proof. Theorem 78. Proof. Theorem 79. Proof
- 205 Theorem 80. Proof. Theorem 81. Proof. Theorem 82.
Proof. Theorem 83
- 206 Proof. Theorem 84. Proof. Theorem 85
- 207 Proof. Corollary
- 208 § 15. Majorizable sets, special sets, Normal sets.
Definition 40. Remarks
- 209 Theorem 86. Proof. Theorem 87. Proof. Theorem 88. Proof
- 210 Definition 41. Theorem 89. Proof
- 211 Normal Sets. Theorem 90. Proof
- 216 § 16. The Mean-Value Theorem. Theorem 91. Proof
- 218 Theorem 92. Proof. Example. Theorem 93.
- 219 Proof. Theorem 94
- 220 Proof. Definition 42. Theorem 95
- 221 Proof
- 222 § 17. Fourier Series
- 223 Theorem 96
- 224 Proof. Theorem 97. Proof: trivial. Theorem 98.
Proof: Bessel's inequality
- 225 § 18. Formal Properties of Fourier Series. Theorem
99. Theorem 100. Theorem 101. Theorem 102.
Proofs. Theorem 103
- 226 Theorem 104. Theorem 105
- 227 Proof. Theorem 106. Proof
- 228 § 19. Remarks on the Fundamental Theorem and
Equivalent Theorems. The Fundamental Theorem
(Theorem 107). The Unicity Theorem. (Theorem

108). The Vollständigkeitsatz (Theorem 109)

- p. 232 §20. Integration of A. p. Functions. Theorem 110. Proof
- 234 Theorem 111. Proof I (Bohl)
- 236 Proof II (Favard)
- 240 Remark
- 241 §21. Proof of the Unicity Theorem (de la Vallée Poussin).
Lemma 1. Proof. Lemma 2
- 243 Lemma 3. Proof
- 244 Proof of theorem 108 (and so of the Fundamental
Theorem)
- 247 Corollaries
- 248 §22. Relations between Fourier exponents and
translation numbers. Theorem 112. Proof.
- 250 Theorem 113. Proof. Corollary
- 251 Definition 43. Remark. Theorem 114
- 252 Proof
- 253 §23. Fourier series and Majorisable Sets. Theorem
115
- 254 Proof
- 257 Theorem 116. Proof
- 260 §24. The Approximation Theorem. Theorem 117.
Remark. Proof (Weyl)
- 264 Main Theorem (Theorem 118)
- 265 Proof
- 267 §25. Almost-periodic functions and Limit-Periodic
Functions in A -space. Lemma. Proof
- 268 Theorem 119
- 269 Proof
- 275 Another proof of the Approximation Theorem
- 278 §26. Bochner's Summation Theorem (Theorem 120)
- 283 Remark
- 285 §27. Simultaneous Approximation to Functions of a
Majorisable Set. Theorem 121. Proof

4 Add. Ms. b. 192

- p. 287 § 28. Special types of Fourier series. Theorem 122.
Proof I.
- 289 Proof II
- 290 Proof III (of case (2)). Theorem 123. Remark
- 291 Proof A
- 292 Proof B
- 293 Remarks
- 323 Appendix: Integral Equations and Almost-periodic
Functions. Definition A1
- 324 Definition A2. Definition A3. Definition A4
- 328 Definition A5.
- 329 Theorem A. Proof
- 330 Part I
- 337 Part II
- 353 Montel's Theorem (extended form). Proof
- 356 Lemma. Proof
- 358 Index to Volume I
