

1 Add. Ms. b. 193  
Almost Periodic Functions. Harald Bohr. Göttingen. W.S.  
1928-9. Vol. II

p. 1 Chapter V. Almost Periodic Functions of a Complex  
Variable. §29. Introduction and Preliminary  
Theorems

4 The Pragem-Lindelöf Theorem. Remark.

5 Proof. Cor.

6 Doetsch's Theorem. Proof

7 Theorem A. Proof

8 Theorem B. Proof

9 Theorem C. Proof

11 Schwarz's Lemma. Proof. Lindelöf's Principle

14 Theorem D. Proof

15 Notation. The Separation Theorem (Theorem E).  
Theorem E

16 Proof

18 §30. Almost-periodicity; Definition and Immediate  
Consequences. Definition 44

19 Theorem 123. Corollary

20 Theorem 124. Proof

21 Theorem 125. Proof. Corollary. Theorem 126

22 Theorem 127. Corollary. Theorem 128. Proof.

23 Theorem 129. Proof

24 Corollary. Proof.

26 §31. The Dirichlet Series of an A. p. function.  
Theorem 130. Proof. Theorem 131

27 Proof. Corollary. Theorem 132

28 Theorem 133

29 The Unicity Theorem (Theorem 134). Proof. Proof

30 Parseval's Theorem (Theorem 135). Proof. The  
Approximation Theorem (Theorem 136)

31 Proof

p. 32	§32. Special types of Dirichlet Series. Theorem 137. Proof
33	Remark
34	Dirichlet series with negative exponents. Theorem 138. Proof
35	Remarks
38	Theorem 139. Proof. Corollary
39	Theorem 140. Proof. §33. Behaviour at the "point ? $\sigma = +\infty$ "
40	Theorem 141. Proof
41	Theorem 142. Remark
42	Proof of theorem 142
45	Remark
46	Picard's Theorem (theorem 143)
47	Proof of Picard's Theorem
48	Theorem 144. Proof
50	§34. The Laurent Separation
51	Theorem 145. Proof
54	Theorem 146
55	Remark. Proof of theorem 146.
57	Another formulation (theorem 146')
58	The Extended Unicity Theorem (Theorem 134, 3)
59	Proof
60	Theorem 147. Proof
62	Theorem 148
63	Proof
64	§35. Almost-periodicity and Analytic Continuation
65	Definition 45. Theorem 149. Proof
66	Definition 46
67	Theorem 150. Proof. Theorem 151. Proof. Theorem 152 (The main theorem)
68	Proof
71	Chapter <u>VI</u> . Generalised Almost-periodic functions.

2 Add. MA. 6. 193

§36. Introductory

P. 74	Definition 47	Definition 48
77	Definition 49	
78	Definition 50.	Definition 51
82	§ 37. Stepanoff Functions	
83	Definition 52.	Theorem 153
84	Proof	
87	Definition 53.	Definition 54
88	Theorem 154.	Proof
91	Lemma.	Proof
94	§38. Bochner Approximation to Stepanoff Functions	
96	Theorem 155.	Lemma
97	Proof.	Proof of Theorem 155
103	§ 38. Concluding Remarks	
107	Bohr's Example of a Function without singularities which has different Dirichlet series in two abutting strips (MA 103, 1930, 1).	Theorem. Proof
108	Notation + Preliminaries	
109	Lemma	
112	The construction	
114	First step	
116	Second step	
? 118	nth step	
119	Passage to the limit	
121	Final Remark	
123	(Normal families and a. p. functions)	
[end]	Rouché's theorem.	Proof
