

Add. Ms. b. 184

- P. 1 Theory of Numbers: Supplement. The Fundamental Theorem. Lemma I. Lemma II. Lemma I'
- 2 Lemma II²
- 3 Moduli. Theorem
- 4 Proof
- ? 6 The Arithmetical function $d(n) = \sum_{d|n} 1$. Order of magnitude of $d(n)$
- 8 Theorem. Lemma. Proof
- ? 10 Average order of $d(n)$
- 11 Theorem
- ? 13 Properties of $\sigma(n)$. Theorem. Proof.
- 22 The Fermat-Euler Theorem. Euler's proof (A Modern Proof)
- ? 25 Möbius's Function $\mu(n)$. Definition. Ch. I. Ch. II. Proof
- 26 Ch. III. Proof. Ch. IV
- 27 Proof. Example. Theorem V
- 28 Theorem VI, VII
- ? 31 $M(n)$
- 32 Henry Smith's Proof of the Fermat-Euler Theorem.
1. Continuants
- ? 33 2. Euler's rule for writing down $\bar{K}(l, n)$
- 34 2.1 Theorem I. Theorem II
- 35 2.2 Theorem III. Theorem IV
- 36 3. Fermat's Theorem.
- 39 Identities derived from Generating functions associated with the Riemann ζ -function
- 46 Quadratic Resets.
- 48 The Legendre Symbol (D/p) . Df.
- 49 Theorem I
- 51 Theorem II
- 53 Theorem III
- 55 Theorem IV

p. 59 (3) The law of quadratic reciprocity. $(p/q)(q/p) = (-1)^{\frac{p-1}{2} \frac{q-1}{2}}$
 [60 v] (Monday class exercise (? 1925). Solution)
